This information is provided for educational purposes only. These figures are illustrative, demonstrating the potential impact of compounding interest. They are not predictive of future performance or an accurate representation of account value over time. Actual results will vary due to market conditions, economic factors, and other variables. The performance of life insurance policies vary significantly based on their structure and intended purpose. Not all policies are suitable for the Flexmethod®. Actual performance will differ. Life insurance products generally require time to achieve optimal results and should be used in alignment with long-term financial objectives. You should always consult a qualified tax professional regarding any potential tax implications.
